

# WEBCON BPS 2021 R5

## history of changes for version 2021.1.5.228

### Before upgrading WEBCON BPS

- Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.
- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

### Bug fixes

#### [Form]

- Fixed an error where the Last modified variable returned the user who saved an instance, instead of the user currently following the path to the next step. The previous system behavior has been restored.

#### [Actions]

- Fixed an error when executing the "Send a custom e-mail" action. The error appeared if the "Send immediately" option was selected in the configuration.

#### [Data sources]

- Added handling for sub-sources for a given business entity when mapping form fields in the

OCR AI recognition action.

- Fixed an error with assignment filters (e.g. instances created by a user) in reports based on 'BPS source' data sources.
- Fixed an incorrect mapping of the global parameter in the REST data source. The edit mode has been changed from JS to the standard mode for business rule parameters in the source and for the REST action.
