WEBCON BPS 2021 R5

history of changes for version 2021.1.5.315

Table of Contents

1. Before upgrading WEBCON BPS

1.1. Before upgrading WEBCON BPS

- To avoid unnecessary interruptions in the system operation, make sure that WEBCON BPS licenses are up to date. To do this, verify the availability of the **WEBCON BPS Server 2021** license in the license report. This report is available from **WEBCON BPS Designer Studio -> *system menu in the upper left corner -> Licenses***. Current licenses must be downloaded if necessary.

- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

2. Bug fixes

2.1. General

- Fixed the "Migrate column names to ID tags in item lists' configurations" error which occurred when updating from WEBCON BPS version 2019.

- Improved handling of **Person or group** fields whose results are limited to a selected SharePoint group. An issue occurred when the field was filled out automatically during **WebCon WorkFlow Service** operations (e.g. timeout actions, starting workflows with HotMailBoxes and HotFolders).

2.2. Portal

- Fixed column width on Portal **Reports** - setting custom column widths is possible in all supported browsers except IE.

- The order of columns in the Excel file exported from a **Dictionary Report** will correspond to the column order on the view from which the export was initiated.

2.3. Form

- Fixed incorrect filtering of **Item list** columns with calculated value including Polish diacritics. The issue resulted in removing Polish diacritics in the filter values returned by the query to the internal API. After choosing the filter with such values, the system was unable to find the respective value. The problem occurred only for the database with **en-US** language.

2.4. Actions

- Fixed an issue with duplicate/invalid keys in copied actions. The issue was propagated by copying actions on steps and global actions. The migration script will remove all invalid keys, and actions copied in the future will be assigned valid foreign keys.

- Fixed an issue with checking if the target folder for the **Add an attachment to a list** action exists - checking the folder names will not be case sensitive.

- Fixed an issue with all-day events set yp using the **Exchange events** action - the action would not work correctly when using Microsoft Graph.
