WEBCON BPS 2021 R2

history of changes for version 2021.1.2.101

Before upgrading WEBCON BPS

- Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.

- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

Information

[General]

- For Standalone installation type the option to edit .doc files directly on the form is now limited. To use the file editing functionality it is necessary to convert the .doc files to .docx format.

[Designer Studio]

- Implemented changes in the definition of the exemplary process available in WEBCON Designer Studio.

[Designer Desk]

- Implemented performance improvements in the documentation generating tool in the WEBCON Designer Desk.

Bug fixes

[General]

- Fixed a "Invoke REST web service" action bug which prevented from sending a message in raw format.

- Fixed the license mechanism used by the service account, including an added option to release licenses used by the service.

[Portal]

- Fixed a bug in the rule clearing the item list column with a numeric value.

- Fixed an error caused by the "null" value on AttBool report columns.

- Fixed an issue which caused that the required comment was not saved after moving along the path after using a mass action on a report.

- Fixed a bug which prevented from logging into WEBCON BPS Portal via AD from Edge and Chrome browsers.

- Fixed the display of amounts and numbers on the form for de-CH culture.

- Fixed an error of triggering mass actions if the report on which they are located was embedded on the dashboard.

- Fixed a bug related to searching among choice fields on the reports.

[Modern form]

- Fixed a bug which caused the lack of successive executions of the form rule on the item list.

- Fixed a bug causing incorrect display of requiredness notification

- Fixed an error which prevented the OCR mechanism from reading a text field placed under a field in "Read only" mode.

[Actions]

ι Fixed a bug which occurred on the path additional validation, if it used a business rule.

ι Fixed an issue of the Import-Export action occurring when importing a previously exported package which includes a new application and process to an environment where this application does not exist.

ι Fixed an error caused by a change of the Response:Body mapping in the REST action configuration.

ι Fixed an issue of the Import-Export mechanism which caused the inability to change attachment database if it already contained attachments, and a lack of information in the import analysis tool about replacing the attachment database.

ι Fixed a bug causing a problem with correct handling of Response-Body in standard REST actions.

[Mobile app]

ι Fixed an issue which prevented from generating PDF files in Microsoft Teams on mobile devices.

[Service]

ι Fixed the bug of the license service failover mechanism.

[Designer Desk]

ι Optimized performance of the workflow designer in WEBCON BPS Designer Desk when designing workflows with a large number of steps and paths.

ι Implemented performance improvements in the workflow designer of the WEBCON Designer Desk.
