

WEBCON BPS 2020.1

history of changes for version 2020.1.3.540

Before upgrading WEBCON BPS

- 1 Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.
- 1 If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

Changes to existing features

[Portal]

- 1 The operation of the button used to manually add a replaced user ("Add" and providing login) has been changed - from now on this operation is only possible for the global system administrator.
- 1 Improved the BPS ID validation of local groups after their update. From now on this validation will only be performed when creating new BPS groups.

Bug fixes

[Portal]

- 1 Reports should now work correctly when the number of rows per page is set dynamically.

- 1 Fixed an error which caused Power BI reports to not display after refreshing the page.
- 1 Fixed a bug in the choice field placed on the report which had the "Support multi language names" option selected, which resulted in a search done by the ID, not by the instances name.
- 1 Fixed a data filtering error on Portal reports, when the name filter contains the " ' " character.
- 1 Fixed errors of the "Date and time" form field.

[Modern form]

- 1 Fixed an error related to narrowwind down the data sources on the item list when sorting by a selected column.
- 1 Fixed an error in the "Related attachments" item list column when using an SQL query in its configuration.
- 1 Fixed an error related to the usage of the requiredness rules on a tab panel.

[Designer Studio]

- 1 Fixed a validation error of a database selected by the user from the SharePoint feature.
- 1 Fixed a bug of the REST data source which caused that cloning it copied only its name, not its complete configuration.

[Form fields]

- 1 Fixed the behavior of the SharePoint list on Classic Form.
- 1 Fixed an issue that would prevent the user from selecting a value from the popup search window in a 'Choice field (picker)' type column on an Item list.

[Actions]

- 1 Fixed a bug in the Import-Export mechanism which updated SDK projects

despite unchecking them during import.

- | Fixed a bug in the Import-Export mechanism which caused the "Redirect all e-mail notifications" option in mass notifications to be unchecked.

- | Fixed a bug of the Import-Export mechanism which occurred when before importing a package, a SharePoint group was deleted, but it was not followed by synchronization.

- | Fixed a bug in the "Change item list values" action where a value not included in the data source of the picker/dropdown/autocomplete column was searched in it multiple times when setting each dependent field. From now on it will only happen when setting the first dependent column.

- | Fixed a bug in the Import-Export mechanism which caused an incorrect export of the sub-sources

- | Fixed an error in exporting Excel file created on the Portal from the dictionary process report.

- | Fixed the content of the displayed message when adding users to groups by using action.

- | Fixed the date import from Excel file by using the "Read data from an Excel file" action.

- | Fixed a bug in the "Add/remove user" action which caused a long execution and timeout.

- | Fixed the REST action invocation when one of the body parameters was returned by a business rule with a parameter.

- | Fixed an error occurring in the e-mail messages configured in global actions if the recipients were only on the Cc list and there were none on the "To" list.

[Mobile app]

- | Fixed a bug which caused redirects and JSONs to appear suddenly in the mobile application.

- 1 Fixed a bug which caused the application to freeze when logging in to it for the first time from a new profile on Android devices.

[Service]

- 1 Fixed a BPS group synchronization bug which was caused by white characters in the group BPS ID.
