

WEBCON BPS 2021 R4

history of changes for version 2021.1.4.118

Before upgrading WEBCON BPS

- 1 Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.
- 1 If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

Information

[General]

- 1 Due to the discovery of the CVE-2021-44228 vulnerability in Apache Log4j2, the log4j libraries were raised to version 2.16. For more information, see <https://community.webcon.com/articles/security-apache-solr-affected-by-apache-log4j-cve-2021-44228/39>.

Bug fixes

[Designer Studio]

- 1 Fixed an error when configuring HotMailBoxes. When selecting "MS Exchange 2013/2016/2019" as a server type, a user could not enter the server address - the file was grayed out.

[Rules]

- 1 When exporting/importing rules that use parameters, the mechanism will now correctly take into account the parameter key (i.e. its identifier), not the order in which they are used in the rule. Because an error caused these two characteristics to get mixed up, imported rules would end up with their parameters in the wrong places.

[Web Part]

- 1 Fixed an incorrect operation of SWE reports in SharePoint. The error was related to the "Assigned to" report column.
