WEBCON BPS 2021 R5

history of changes for version 2021.1.5.336

WEBCON

Table of Contents

1. Before upgrading WEBCON BPS

1.1. Before upgrading WEBCON BPS

- To avoid unnecessary interruptions in the system operation, make sure that WEBCON BPS licenses are up to date. To do this, verify the availability of the **WEBCON BPS Server 2021** license in the license report. This report is available from **WEBCON BPS Designer Studio -> *system menu in the upper left corner -> Licenses***. Current licenses must be downloaded if necessary.

- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

2. Changes to existing features

2.1. Portal

- Calculated columns, system fields, and Item lists will not be exported to Excel from **Dictionary reports**.

3. Bug fixes

3.1. Form

- Improved the scaling of the dropdown list in choice fields - the list width will now scale properly when the values in it are long and contain no spaces.

- Improved the scroll bar for **Item lists** placed in form field groups. The bar will be shown correctly in Edge and Chrome browsers.

- Updated the version of the IT Hit WebDAV library for editing PDF files through the form.

- Fixed an issue that blocked the cloning feature for **Item list** rows in workflows where the step form had "broken inheritance" from the global form template.

3.2. Actions

- The button for testing in Exchange actions will now open a pop-up window for entering the user for which the test Exchange action will be carried out.

3.3. Service

- Fixed an issue related to not taking into account historical database acronyms in 2D codes.
