1. Before upgrading WEBCON BPS

1.1. Important information

- To avoid interruptions in the system operation, make sure that WEBCON BPS licenses are up to date. To do this, verify the availability of the **WEBCON BPS Server 2022** license in the license report. This report is available from **WEBCON BPS Designer Studio -> system menu in the upper left corner -> Licenses**. Current licenses must be downloaded if necessary.
- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

1.2. General

- Please remember that **WEBCON BPS Authorization Service** (auth.webconbps.com) will be retired by the end of 2023. Users that have **WEBCON BPS Authorization Service** configured in their system should consider switching to other authentication providers.

The system's built-in authentication providers (OpenID Connect or ADFS) should be used instead of **WEBCON BPS Authorization Service**.

2. Bug fixes

2.1. Portal

- Fixed a **Business rule** and **Form rule** logging error when changing the context of a form, i.e. switching between its elements.

2.2. Form

- Fixed an error that occurred when attempting to import **Global field** translations into a process form field and changing its type in the configuration.
- Fixed an error that occurred when cancelling the deletion of an **Item list** whose column was used in a rule defining the **Layout** of this Item List.

2.3. Rules

- Fixed an error on the form caused by **Form rules** being incorrectly interrupted during their execution. The error occurred when rapidly switching browser tabs.
