WEBCON BPS 2021 R2

history of changes for version 2021.1.2.108

Before upgrading WEBCON BPS

- Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.

- If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

Changes to existing features

[Portal]

- The operation of the button used to manually add a replaced user ("Add" and providing login) has been changed - from now on this operation is only possible for the global system administrator.

Bug fixes

[Portal]

- Fixed an error which caused Power BI reports to not display after refreshing the page.

- Fixed a bug in the choice field placed on the report which had the "Support multi language names" option selected, which resulted in a search done by the ID, not by the instances name.

- Reports should now work correctly when the number of rows per page is set dynamically.

[Designer Studio]

- Fixed a bug which caused translations from e-mail notifications template not to copy, when a template in a process was created.

[Actions]

- Fixed a bug occurring on the classic form when adding a value not present in the data source of the choice field.

- Fixed an error occurring in the e-mail messages configured in global actions if the recipients were only on the Cc list and there were none on the "To" list.
