

WEBCON BPS 2020.1

history of changes for version 2020.1.3.468

Before upgrading WEBCON BPS

- 1 Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.
- 1 If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.

New features

[Actions]

- 1 It is now possible to export processes from an application without related processes belonging to other applications. It facilitates export of one of the many processes from complex applications which until now was often burdened with time-consuming analysis of many process relations.

Bug fixes

[General]

- 1 Fixed a bug in the REST connection testing feature.
- 1 Fixed an error which caused a translation to disappear when entering it in the Studio.

- 1 Fixed an error which caused assigning a license to an incorrect user and an incorrect user appearing as an administrator of a newly created application.

- 1 Fixed a bug in the installer which caused the missing value in the PortalAppPoolIdentity parameter.

- 1 Fixed an SQLException bug appearing when deleting a form field group.

- 1 Improved the form field handling by the AAD synchronization.

- 1 Fixed an error which caused the default attachment category to not set properly.

[Portal]

- 1 Fixed an item list bug which caused the alphabetical sorting (by field name) of attachment's categories to display incorrect results.

- 1 Fixed a calculated column error which resulted in displaying incorrect dates depending on the selected language.

- 1 Fixed an error of the standard filters for DateTime type columns on the report which resulted in displaying incorrect results.

- 1 Fixed a bug which caused links on the report to be incorrectly colored.

- 1 Fixed a bug of the hidemenubutton command causing a part of the menu to disappear as well.

- 1 Fixed the display of the currency for item list calculated columns.

- 1 Fixed a bug occurring when logging in to the Portal by using the MFA

[Modern form]

- 1 Fixed the display of the survey form fields.

- 1 Fixed an error which caused a JS formula using a checkbox field not to work properly.
- 1 Fixed the operation of the "Hide menu button" rule used on page load.
- 1 Fixed a bug with importing negative values from an Excel file to an item list.

[Form fields]

- 1 Fixed a bug in the "Multiple lines of text" form field which after turning on the "Append mode" lost its value on the postback.

[Actions]

- 1 Fixed a bug that resulted in problems with removing a user added via the administrator's panel, if the deletion was done via the Designer Studio running on a Cloud installation.
- 1 Fixed a bug in the action of changing values on item list columns of floating point number type that appeared after migration from the 2017 version.
- 1 Fixed an Excel file generation file error when exporting item list column "Data row".
- 1 Fixed an Import-Export mechanism error which was caused by copying action between processes.
- 1 Improved the usage of the Response:Body mapping in the REST action configuration.
- 1 Fixed an Import-Export mechanism error caused by using the Studio in --wscache mode and copying form fields between processes of different applications.
- 1 Fixed the content of the Import error message which did not point to a specific database column.

[Web Part]

- 1 Fixed the edit time display in KPI analyzes

[Service]

- | Fixed a service user synchronization error which was a result of an unexpected value in the COS_Login column of the service account.

- | Fixed a MailApproval error which added text to user's response which caused the command to be read incorrectly.

- | Fixed a full AD synchronization error if the user who initiated it didn't have access to certain groups.

- | Fixed an error which resulted in incorrect counting of the attachments when using HotMailBox.
