

# WEBCON BPS 2020.1

## history of changes for version 2020.1.3.321

### Before upgrading WEBCON BPS

- 1 Make sure that WEBCON BPS licenses are up to date. It is recommended to refresh licenses before upgrading the system to avoid any unnecessary downtime.
- 1 If the changelog contains a section titled "Changes to existing features", please verify whether the changes will impact your implemented system in any way.
- 1 Changes introduced in this version will break the compatibility of the Export-Import mechanism. Exported process packages created in versions 2020.1.3.285 and older cannot be imported to the newest system version. In order for an import to be possible, update the environment to the newest version and export the processes again.

### Changes to existing features

#### [General]

- 1 The appearance of the page confirming logging in to WEBCON BPS Designer Studio via browser has been changed.
- 1 Introduced an option to configure the method of adding attachments related to the instance to the SOLR index. If the attachment content from a selected workflow instance should not be displayed in the search results or attachments in the workflow instance are very large and would unnecessarily bloat the SOLR index, it is possible to turn off the attachment indexing. Option "Add attachment content to SOLR search index" is available for each process in the "Settings" tab.

### [Modern form]

- 1 The appearance of the checkboxes displayed on the Modern form in the Chrome browser has been modified.

## Information

### [Portal]

- 1 For the WEBCON BPS Cloud Platform installation it is now possible to download a Modern Web Parts for SharePoint Online installation package. This option is available for the user with a System Administrator role in the WEBCON BPS Portal user menu.

## New features

### [General]

- 1 Introduced configuration of additional custom headers returned with each response. This option is available in WEBCON BPS Designer Studio in System settings -> Global parameters -> Custom response headers tab.

### [Data sources]

- 1 It is now possible to use a connection to a current BPS database when creating sources of MSSQL type.

## Bug fixes

### [General]

- 1 Fixed an error which caused an exception when double-clicking in the variable editor a variable which can't be used.

### [Portal]

- 1 Fixed the font size in the picture type field.
- 1 Fixed a cache error during saving/creating more than one report.
- 1 Fixed a search engine error which displayed data to which the user had not been granted access.

- 1 Fixed an error caused by the data structure displaying "Bad Gateway" message.
- 1 Fixed the display of the information panel of the Outlook Add-In.
- 1 Fixed the display of long names in attachment categories.
- 1 Fixed the display of the document template process report which was created in the WEBCON BPS Portal and displayed in the Studio.
- 1 Fixed the data presentation on a report which uses SOLR search results as its source.
- 1 Fixed the report configuration in cases when the user has access only to self-created private views.
- 1 Fixed a Gantt chart bug which occurred when configuring days off per UserID.
- 1 Fixed a translation bug of the German language version of the Portal.
- 1 Fixed a SOLR indexation bug which caused a timeout.
- 1 Fixed the multilingual sources bug on the vacation chart.
- 1 Fixed an error occurring when adding two same widgets.
- 1 Fixed the display of global form fields on a report in a SOLR mode.

#### **[Modern form]**

- 1 Improved switching between attachments in Internet Explorer browser.
- 1 Fixed an item list column coloring bug.

- 1 Fixed the display of the form field history in Modern view if it was saved with an unvalidated value in the choice field.
  
- 1 Fixed a display error of the item list column in the single row edit mode.
  
- 1 Fixed the display of the row presenting the data collected in the OCR verification step.
  
- 1 Fixed an error of the "BPS users" data source working in the "Current user direct subordinates (include user)" mode which displayed wrong users.
  
- 1 Fixed a loading error of an archived form with an "Item list" form field.

### **[Processes]**

- 1 Fixed an error in the dictionary process where the drop-down and autocomplete choice fields incorrectly displayed information about which data source column was selected.

### **[Form fields]**

- 1 The date and time form field has been uniformed.
  
- 1 Fixed the "text-align" style for "integer" form fields.
  
- 1 Fixed an items list error which caused the row edit window not to appear.
  
- 1 Fixed bugs in the "Recipient e-mail address" form field in the e-mail notification configuration with deployment settings.

### **[Actions]**

- 1 Improved the Import-Export mechanism.
  
- 1 Fixed the content of the log file generated at the application export.
  
- 1 Fixed an error of the Import-Export mechanism when importing start buttons.

- ı Fixed the OCR AI project export mechanism.
  
- ı Improved the attachments' digital signing with the qualified signature.
  
- ı Fixed the global action "Generate/update Word file".
  
- ı Fixed an error of the "Add privileges" action which prevented from adding them to a validated local group.

### **[Mobile app]**

- ı Fixed the preview of the mobile form in the Studio.
